Introducing the MARQ HPB High Performance Bliss Former

Experience unparalleled efficiency and ease with the MARQ HPB High Performance Bliss Former, designed to simplify and enhance your production process. This state-of-the-art machine eliminates the need for operators to stand on platforms or lift tray-blanks overhead. The main body of the carton is effortlessly picked up from top of stack and precisely guided past glue heads into the forming section, ensures flawless operations.

Our innovative design features large-capacity hoppers that securely pull the side panels and place them onto the ram. These panels are mechanically folded over the ram and then driven into the forming section. The forming section is equipped with our proprietary spring-loaded forming guides, which guarantees perfect forming even when dealing with blemishes or inconsistencies in the board. Finally, the carton enters the compression section, where it is mechanically compressed to achieve superior, repeatable adhesion.

With the MARQ HPB High Performance Bliss Former, you can count on consistent quality and increased productivity for all your packaging needs.

Talk to a MARQ representative to see how we can help streamline your packaging process.
